TM 750-134	Procedures for Rapid Deployment Redeployment and Retrogradation of U.S. Army Rotary Wing Aircraft
TM 750-199	Procedures for Rapid Deployment Redeployment and Retrogradation of U.S. Army Aircraft Components, Spare Parts, and Support Equipment (Class II (A) and Class IV (A) Supplies)

## APPENDIX B

## MAINTENANCE ALLOCATION CHART

## SECTION I - INTRODUCTION

**B-1. MAINTENANCE ALLOCATION CHART.****B-2. INTRODUCTION.****B-3. GENERAL INFORMATION.**

a. The maintenance allocation chart assigns maintenance functions to the lowest level of maintenance based on past experience and the following consideration:

- (1) Skills available.
- (2) Time required.
- (3) Tools and test equipment required and/or available.

b. Only the lowest level of maintenance authorized to perform a maintenance function is indicated.

c. A maintenance function assigned to a maintenance level will automatically be authorized to be performed at any higher maintenance level.

d. A maintenance function that cannot be performed at the assigned level of maintenance for any reason may be evacuated to the next higher maintenance organization. Higher maintenance levels will perform the maintenance functions of lower maintenance levels when required or directed by the appropriate commander.

e. The assignment of a maintenance function will not be construed as authority to carry the associated repair parts in stock. Authority to requisition, stock, or otherwise secure necessary repair parts will be as specified in the repair parts appendix.

f. Normally there will be no deviation from the assigned level of maintenance. In cases of operational necessity, maintenance functions assigned to a maintenance level may, on a one-time basis at the request of the lower maintenance level, be specifically authorized by the Maintenance Officer of the level of maintenance to which the function is assigned. The special tools, equipment, etc., required by the lower level of maintenance to perform this function will be furnished by the maintenance level to which the function is assigned. This transfer of a maintenance function to a lower maintenance level does not relieve the higher maintenance level of the responsibility of the function. The higher

level of maintenance will provide technical supervision and inspection of the function being performed at the lower level.

g. Organizational through depot maintenance of the U.S. Army Electronics Command Equipment will be performed by designated U.S. Army Electronics Command personnel.

h. Changes to the Maintenance Allocation Chart will be based on continuing evaluation and analysis by responsible technical personnel and on reports received from field activities.

**B-4. DEFINITIONS.**

a. **INSPECT:** To determine serviceability of an item by comparing its physical, mechanical, and electrical characteristics with established standards.

b. **TEST:** To verify serviceability and to detect electrical or mechanical failure by the use of test equipment.

c. **SERVICE:** To clean, to preserve, to charge, and to add fuel, lubricants, cooling agents and air.

d. **ADJUST:** To rectify to the extent necessary to bring into proper operating range.

e. **ALIGN:** To adjust specified variable elements of an item to bring to optimum performance.

f. **CALIBRATE:** To determine the corrections to be made in the readings of instruments or test equipment used in precise measurement. Consists of the comparison of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument or test equipment being compared with the certified standard.

g. **INSTALL:** To set up for use in an operational environment such as an emplacement, site or vehicle.

h. REPLACE: To replace unserviceable items with serviceable assemblies, sub-assemblies or parts.

i. REPAIR: To restore an item to serviceable condition through correction of a specific failure or unserviceable condition. This includes, but is not limited to, inspections, cleaning, preserving, adjusting, replacing, welding, riveting and strengthening.

j. OVERHAUL: To restore an item to a completely serviceable condition as prescribed by maintenance serviceability standards prepared and published for the specific item to be overhauled.

k. REBUILT: To restore an item to a standard as nearly as possible to the original or new condition in appearance, performance, and life expectancy. This is accomplished through the maintenance technique of complete disassembly of the item, inspection of all parts or components, repair or replacement of worn or unserviceable elements (items) using original manufacturing tolerance and specifications and subsequent reassembly of the item.

#### B-5. SYMBOLS.

a. The symbols "O, F, H and D" represent Organizational maintenance (O), Direct Support maintenance (F), General Support Maintenance (H), and Depot Maintenance (D) and when placed on the maintenance allocation chart, indicates the lowest level of maintenance responsible for performing the particular maintenance function. Maintenance levels higher than the level of maintenance marked by the symbol are authorized to perform the indicated function.

b. The symbol "%%" applies to organizational maintenance and indicates that the particular maintenance function may be performed provided it is specifically authorized by the direct support maintenance officer. In no case will the direct support maintenance officer require the accomplishment of a "%%" maintenance function by an organization or unit and in no case will a "%%" function authorize stockage of parts at organization level.

c. The symbol (\*) in column 3 and 4 of the MAC denotes that a special tool is required to perform the indicated maintenance function.

d. The symbols (1) through (10) in column 3 of the MAC refer to footnotes on page (17) of the MAC.

**APPENDIX C**

**AIRCRAFT INVENTORY MASTER GUIDE**

**C-1. AIRCRAFT INVENTORY MASTER GUIDE.****C-2. INTRODUCTION.****C-3. GENERAL INFORMATION.**

a. The purpose of Appendix C is to establish those items of installed or loose equipment required by, and authorized for using organizations to accomplish their primary or alternate mission, and to standardize present inventory procedures, using the inventory master guide to determine the inventoriable items of installed and/or loose equipment authorized and required of the designated mission of the aircraft. Insofar as possible, items of equipment are listed in the sequence of their physical location within the aircraft area.

b. Aircraft inventory is subject to change, as a result of authorized changes (MWO's), addition or deletions of property for special missions requirements; therefore, the selection of items of inventory from the inventory master guide may or may not provide a complete inventory list. When it is known that the master guide does not provide a complete inventory list, it will be necessary to research authorized changes (MWO's) and local command directives in order to compile an accurate and exact inventory list.

c. When the compilation of the inventory list is accomplished, this list will be entered on DA Form 2408-17 "Aircraft Inventory Records." For preparation and use of this form, refer to TM 38-750.

**C-4. SECURITY.** It is desired that inventory records be unclassified. Therefore when equipment bearing a security classification or the installation of unclassified equipment is of a confidential or secret nature, accomplishment of the classification will be in accordance with existing security regulations.

**C-5. INVENTORIABLE ITEMS.****Note**

The selection of inventoriable items is without regard to the agency, governmental or contractual, furnishing the items.

## a. Items to be listed are:

(1) Items essential to the execution of the designated mission of the aircraft, such as electronic, photographic, armament, special mission instruments and safety and comfort equipment.

(2) Loose equipment delivered with the aircraft and items subject to pilferage or readily converted to personal use.

(3) Modification kits which are issued or distributed to owning organizations for installation and which are not immediately placed in-work will be recorded on the affected aircraft DA Form 2408-17 (Aircraft Inventory Record) and identified as loose equipment until modification is completed.

(4) Equipment required for operation in special environment.

## b. Items to be excluded are:

(1) Non-accountable items coded as expendable in the applicable stock lists.

(2) Personal issue or furnished on unit allowance or other authority.

(3) Items or components considered basic or integral parts of the airframe or basic aircraft such as engines, propellers, wheels and standard instrument.

(4) Technical publications, check lists and aircraft forms.

**C-6. PERIODS OF INVENTORY.****Note**

Inventoriable items will be checked against the Aircraft Inventory Record (DA Form 2408-17) at the following periods:

a. Upon receipt of the aircraft.

b. Prior to transfer of the aircraft to another organization.

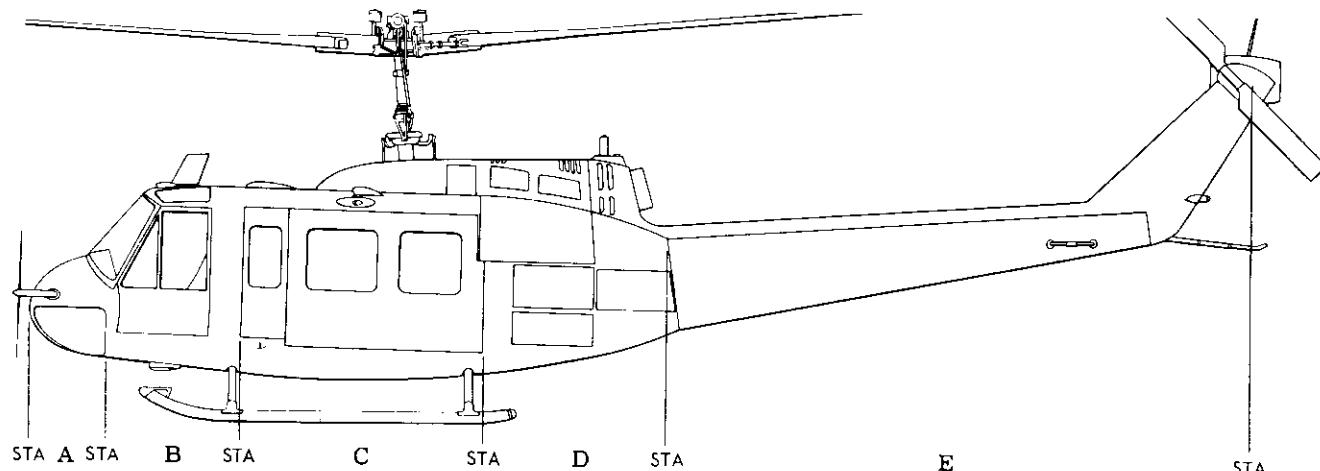

c. Upon placing aircraft in storage and upon removing from storage. Aircraft need not be inventoried while in storage.

d. Twelve (12) months elapsed time since last inventory.

e. Loose equipment shipped under separate cover is inventoried upon transfer by the sending activity and immediately upon receipt by the receiving activity.

**C-7. INVENTORY ITEMS LIST. (Refer to figure C-1.)****Note**

Only those items listed which are installed or assigned to a particular aircraft are to be listed on the DA Form 2408-17, "Aircraft Inventory Record" for the aircraft.

## APPENDIX D

## WEIGHT AND BALANCE

**D-1. WEIGHT AND BALANCE.****D-2. GENERAL INFORMATION.****Note**

For general weight and balance information, refer to TM 55-405-9, Army Aviation

Maintenance Engineering Manual, Weight and Balance. Appendix B, Maintenance Allocation Chart should be consulted for responsibility of weighing and balancing of the aircraft.

**APPENDIX E**  
**ILLUSTRATED FIELD MANUFACTURE ITEMS LIST**

**E-1. INTRODUCTION.**

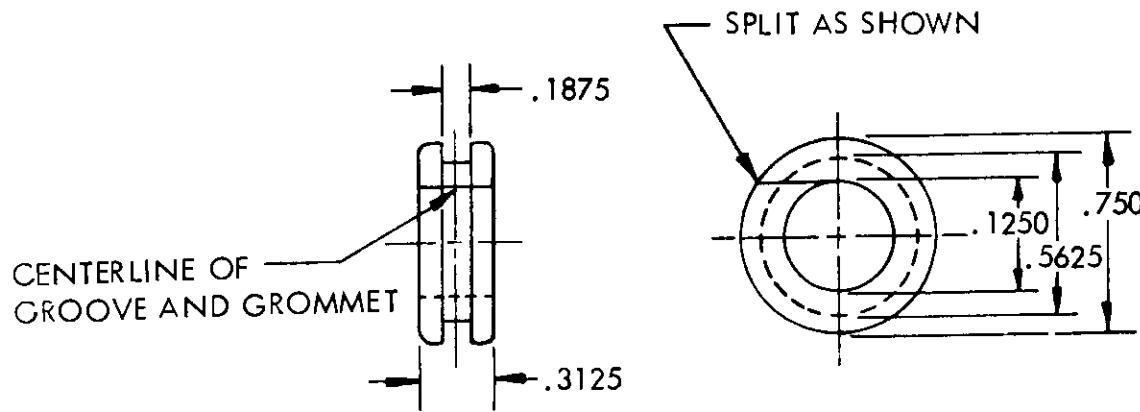

**E-2.** This appendix includes complete instructions, including bills of material, for field manufacture of all items listed in TM 55-1520-210-20P, Organizational Maintenance Repair Parts and Special Tools Lists, bearing MO Source Code.

**E-3.** The part number index lists all items in part number order with a cross-reference to the figure in which the item appears. All materials necessary for manufacture of an item are listed, by Federal stock number, in the bill of material for the item.

**By Order of the Secretary of the Army:**

**Official:**

**KENNETH G. WICKHAM,**  
*Major General, United States Army,*  
*The Adjutant General.*

**W. C. WESTMORELAND**  
*General, United States Army,*  
*Chief of Staff.*

**DISTRIBUTION:**

To be distributed in accordance with DA Form 12-31 (qty rqr block no. 70)  
requirements for Organizational Maintenance Instructions for UH-1D aircraft .

★U.S. GOVERNMENT PRINTING OFFICE: 1969-346-461/108 2
